02 Major business

Power distribution automation & AMI

KEPCO Smart Grid Service

- Providing optical networks for power distribution automation
- Providing optical networks from automation devices in KEPCO control towers to modems (Node) connected to automatic switches

Smart grid service system

- A system that uses the data detected in real-time by the control center without the need to go to the site to detect a blackout
- Reduction of recovery time in case of blackout

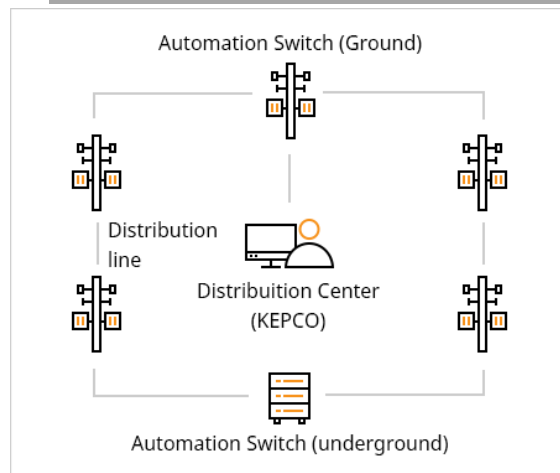

AMI (Advanced Metering Infrastructure)

- Provide optical network for KEPCO AMI (Advanced Metering Infrastructure)
- Provide optical network from KEPCO data transmission device center to DCU

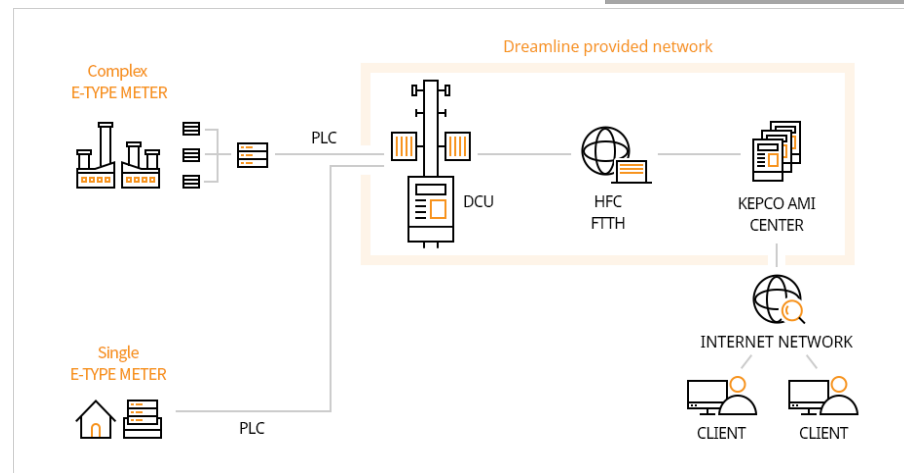

AMI system

- Real-time usage check (Meter reading every 1 month manually⇒ Meter reading every 15 minutes automatically)
- Construction of infrastructure to enable remote meter reading by consumers and KEPCO

02 Major business

IoT & MVNO & Mobile Retail

IoT (Internet of Things)

- Open IoT network standardized with LoRa WAN supports public and private environments, and provides various IoT settings and services including AMI, IBS, Environmental Monitoring (EM) and Tracking.

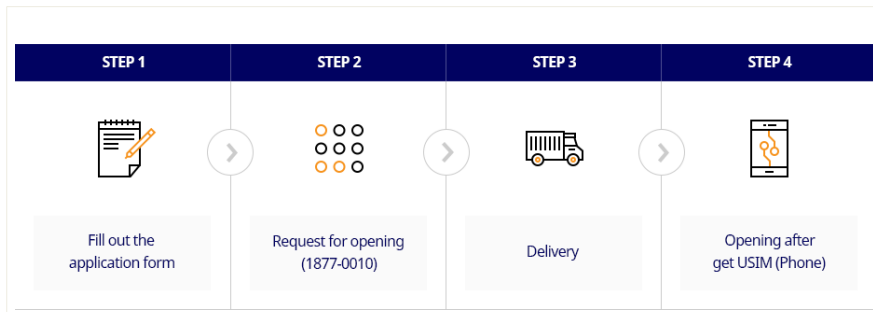

MVNO (Mobile Virtual Network Operator)

- We establish more reasonable prices than those of telecommunication carriers in order to provide stand-alone mobile services.
- In addition, we maximize reasonable options, enabling you to have membership for the service without contracts required and also to purchase mobile phones.

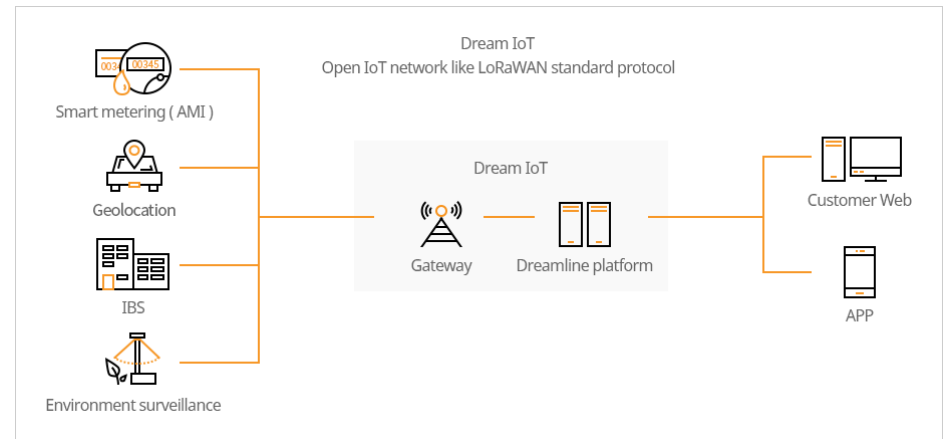

Mobile Retail

- We have built transparent and rational distribution systems in collaboration with domestic mobile telecommunication carriers and manufacturers in order to differentiate from other distribution services.
- In line with MNO service, we have established distribution network in attracting public and corporate customers so that we can provide the service with more reasonable price.

MVNO Service Process

IoT Composition Map

03 Network status

Network facilities

Dreamline **optical network** in the country

57,000

Backbone Network

5,000 km

Highway underground optical network
The shortest distance network with excellent stability

Trunk Network

6,000 km

Major subway and highway optical network

Subscriber Network

46,000 km

Optical network to provide subscriber service

03 Network status

Network operation

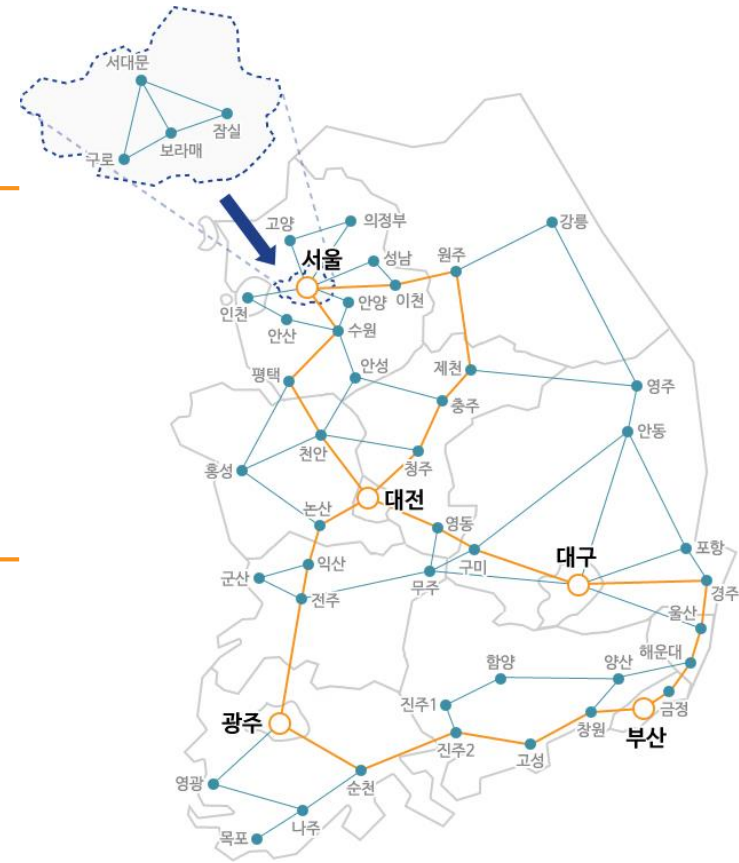

Dreamline nationwide
operational status

53 Place 24 H 365 day

Operations centers / AP

24-hour operation and
maintenance

365 days real time control
